

HILDON

Environmental Policy

Hildon Ltd provides bottled Natural Mineral Water, delightfully still or gently sparkling, to quality wholesalers, restaurants, hotels and homes. Hildon Natural Mineral Water comes from beneath the chalk hills of the beautiful Hampshire countryside in the South of England. The water is naturally filtered and crystal-clear, is free from pollution and has a stable composition and is bottled at source.

At Hildon we are becoming more aware and concerned about today's environmental issues and our impact on the world. We are, therefore, committed to improving our environmental responsibilities by adhering to environmental legislation, and will continue to challenge and reduce our carbon footprint wherever possible.

This process will be the responsibility of the Environmental Management team who will:

Increase the understanding of employees of environmental issues through communication and debate.

- Through email communication.
- Education of energy use.
- Introduction of good environmental practice throughout the organization

Reduce consumption of energy by measuring, challenging and stream lining compliances and processes.

- Monitoring and measuring against base line energy levels on a regular basis.
- Examining processes, machinery, lighting, transport etc to ensure they are as energy efficient as possible.
- Changing processes to be as efficient and environmentally friendly as possible.
- Recording and reporting the impact of changes introduced.

Use the Waste Hierarchy system to reduce, re-use and then recycle any waste we produce.

- Analyse current wastage
- Review current needs to raw materials
- Explore opportunities for re use and then recycle.

Look at responsible sourcing of raw materials and any products used.

- Examining our current suppliers' environmental policies.
- Developing relationships with responsible suppliers
- Ensuring that our suppliers are fully aware of our environmental policy and expectations.

Improve and develop our Social Sustainability policy.

- Work with local community on local projects for local people.
- Work with UK based environmental organizations to enhance and progress projects.

Work with organizations to help educate the end user about our product.

- Work with our customers to reduce the impact our product has on the environment
- Educate consumers about recycling our packaging using press and local establishments.
